

## antiviral and associated therapy - all results

Treatment	Number of studies	Demonstrated or suggested results	Inconclusive results	Uncertain results	Safety results
ivermectin	1 study <sup>1</sup>		-	suggested 2.6-fold increase in viral clearance by day 7 but the degree if certainty is unassessable	
zinc	1 study <sup>2</sup>		inconclusive results for : deaths ; clinical improvement ; clinical improvement (28-day) ; mechanical ventilation		

Uncertain results are statistically significant results but obtain in trial with high risk of bias.

Demonstrated results are significant results obtained on the primary endpoint of a trial at low risk of bias or with some concerns.
